

SPORTSYSTEMS
BUILDING A BETTER GAME

PRODUCT CATALOGUE

THE SPORTS INFRASTRUCTURE SPECIALISTS

DEAR CUSTOMER,

It was the summer of 1978 when the first "gooseneck style" basketball system appeared in the Canadian market. A revolution had begun! Schools and parks loved them for their ruggedness and sleek appearance. Buyers made Sport Systems their first choice for basketball systems.

Over the years, our business has expanded to serve clients across North America and around the world. In addition to growing geographically, our firm has broadened its product offering to incorporate all types of premium, institutional sports equipment and athletic facility components.

As a turnkey supplier of sports equipment, customers benefit from the "entire package" – superior product knowledge, merchandise of unsurpassed quality and legendary customer service. It is this formula that has kept clients coming back year after year. It is this formula that has propelled our company to the lead in the sports infrastructure market.

For over three decades, clients have made **Sport Systems** their first choice for project support. We are proud of the longstanding relationships we have formed within the education sector, the municipal market and the construction industry alike.

Put us to the test and see how your organization will benefit from all that can be offered by a premium supplier of athletic facility equipment. We are ready to tackle your next project!

Sincerely,

Matthew Mould, P.Eng. MBA

President

CASE STUDY HELPING CARLETON UNIVERSITY BRING BACK RAVEN'S FOOTBALL IN STYLE

DESIGN, FABRICATE & INSTALL GRANDSTAND

Revitalize a neglected stadium—fast

After a 15-year hiatus, Carleton University revived its football program with the help of the Old Crows—a group of Carleton football alumni and community supporters. The cornerstone of the revitalization was the upgrade of the team's neglected field and stadium. Sport Systems designed and built a new I-Beam grandstand with seating for 3000+ fans, complete with press boxes for media and coaching staff.

A team effort

The job's tight schedules and large scope required complex planning and coordination of logistics. Our drafting team generated a complete set of drawings stamped by our engineering consultants. Once the necessary building permits were in place, our engineering partners began the foundation design and layout.

Ready for kick-off

With approvals in hand, fabrication of the grandstands began at Sport Systems' facility while we coordinated the site preparation. Our foundation design and plans helped fast-track the process and over the course of nine weeks the installation and the project was complete—well ahead of kick-off—just in time to join the tailgate party!

We are extremely proud to have partnered with Carleton University and the Old Crows Alumni, and play a key role in bringing Raven's Football back to Keith Harris Stadium! – GO RAVENS!

OUTDOOR SEATING SOLUTIONS

OUTDOOR SEATING SOLUTIONS

Sport Systems works with organizations by providing complete design & build services for new bleacher installations as well as refurbishments. Whether your organization requires a custom-tailored seating solution, a standard product or assistance in replacing decking, we can take care of all of your spectator seating needs.

ANGLE FRAME BLEACHERS

Sport Systems designs, manufactures & offers coast to coast installation services for standard & custom outdoor bleacher systems. With thousands of seats installed nationwide, our in-house engineering department excels at helping customers maximize their seating capacity given specific site constraints. Products are designed according to provincial and national building code (NBC) standards.

Outdoor bleachers are typically manufactured using steel angle understructures, which are hot-dipped galvanized to ASTM standards after fabrication. **Sport Systems** is certified by the CWB (Canadian Welding Bureau) to 47.1 (steel) and 47.2 (aluminum) welding standards. Conventional units are available in 3, 4, 5 and 10-tier arrangements & custom units are available with closed decking, elevated platforms and accessibility ramps.

While not exhibiting the clear span characteristic of its beam-style counterpart, angle frame bleachers feature continuous framework members spaced every 5' to 6' and can be installed on compacted granular surfaces and concrete slabs. These units are a great way to deliver seating when projects are budget-focused and seating is limited to 15 rows and under.

Before embarking upon your project, call the bleacher experts at Sport Systems today & put our years of experience to work for you!

OUTDOOR SEATING SOLUTIONS

I-BEAM GRANDSTANDS

Sport Systems' permanent beam design is your first choice when seeking to create usable space beneath the stand. Large scale facilities have come to realize that our clear span structure allows the inclusion of amenities such as restrooms, concessions, storage and access beneath the stand. Beam stand understructures can be offered in hot-dipped galvanized or powder-coated steel construction. These systems are available with a variety of aluminum decking options to meet the facility designers' budget and performance requirements including, semi-closed deck, closed deck, channel interlock design (the ultimate in deflection resistance) and trough design which directs water to key downspout locations beneath the system.

Our permanent beam designs also offer a myriad of seating options including conventional bench style, bench seating with backrests and premium stadium chair seating. These systems offer the facility designer the ability to customize the installation based on requirements for accessible seating, ramp access, stair cases and vomitories. The vast number of accessibility ramp & seating options, railing styles & front facades allow for maximum versatility, giving you a system that best suits your particular requirements.

Sport Systems works with clients from the concept to commissioning on design-build grandstand projects by providing fundamentals such as layout, seating density calculations, sightline optimization, load distributions, manufacturing and installation. Contact us from the outset to experience seamless project coordination.

I-Beam Understructure

OUTDOOR SEATING SOLUTIONS

PRESS BOXES

Sport Systems is proud to offer clients consultation and budget assistance concerning press box & suite design and installation. All press boxes are built to NBC and CSA specifications and are offered with a variety of unique features including: roof top access & viewing, custom interior and exterior finishes, countertops, raceways, sloping front facades and covered access landings.

Press box understructures are designed as an integral part to any beam-style grandstand and can also be manufactured as a standalone unit for any angle frame bleacher systems.

Standalone press boxes and custom structures are ideal for sport field sites that have smaller bleacher configurations and adequate space for placement. These structures are designed to provide an elevated press box with stair case access from the ground level, separate from any bleacher seating. Features can include clear span, hot-dipped galvanized or custom powder-coated under structure designs to allow for concessions and barrier free travel under the press box. Other features include catwalk platforms and custom stair case configurations. All designs conform to the National Building Codes and local building code requirements.

When contemplating the addition of a press box to your facility, please contact one of our project managers to discuss why our press box designs are industry leading.

Spotter or Video Stand

Timer Table

TIMER TABLES AND VIDEO/SPOTTER STANDS

Take your game to the next level by adding a timer table to your field or pitch. These durable and portable systems come in various lengths and configurations. All systems consist of a galvanized steel structure and anodized aluminum seating and table top. Optional powder-coated finishes are available.

Our line of video and spotter stands provides you with the best spotting and filming angles on the field. These structures are designed for standard elevated heights and come complete with contrast stair nosings and guard rails. Contact us to discuss custom platform heights that may be required.

OUTDOOR SEATING SOLUTIONS

PLAYERS BENCHES

Sport Systems handles a variety of sports benches to compliment your facility. Permanent benches (embedded in concrete and surface mount) are ideal for baseball dugouts, soccer pitches and football fields. Portable benches are ideal for indoor applications. These units are supplied with footpads to eliminate any prospective damage to your floor. All models are available with or without backrests. Custom designs are available upon request. Standard features include tubular galvanized steel legs for permanent benches and aluminum angle struts for portable models. All units feature anodized aluminum seat planks & backrests.

BL-PB-BR Portable Players Bench With Backrest

BL-IGB Permanent In-Ground Players Bench Without Backrest

OUTDOOR SEATING SOLUTIONS

Plastic benches available in portable wall mounted configuration, with or without backrests

PLASTIC BENCHES

Crafted from high-quality recycled plastic and equipped with stainless steel hardware, these plastic benches are versatile enough to be used in many different settings. These sturdy and reliable benches can be found in locker rooms, pools, gymnasiums, parks and arenas. They can be anchored, but often it is not necessary due to their weight and sturdy construction.

Wall mounted benches are also available for locker rooms and other applications and can be custom mitred and cut for inside and outside corners.

Portable benches are available with and without backrests and a number of standard lengths. The bench tops feature a standard seat width of 10-7/8" but are also available in a wider option of 15-1/2".

INDOOR SEATING SOLUTIONS

2400 SERIES TELESCOPIC BLEACHERS

Multi-functional facilities need rapid change over from practice court configurations to game-day main court configurations complete with spectator seating. Benefit from the best of both worlds with our telescopic bleachers. When not in use, these systems retract into a compact storage position and when required, **Sport Systems** can ensure optimum seating capacities for your game day applications.

Sport Systems' telescopic bleachers feature a number of industry leading features which other manufacturers don't offer including but not limited to:

- Full tubular leg construction vs. formed C-channel construction
- Angle iron bracing vs. bent sheet metal bracing
- Panel-lam (HDPE) composite decking vs. painted plywood decking
- Custom rise design capability vs. standard rise only

These characteristics ensure that your telescopic system will stand up to the most rigorous institutional use and offer years of reliable operation.

Bleachers are available with: manual or Posi-Drive Electrical operation, bench seating and individual chairs and a number of other accessories such as hand rails, end curtains and more. These systems are designed according to NBC requirements.

Ask about our telescopic bleachers for your aquatic centre. These systems excel in high humidity environments because their steel components are hot-dipped galvanized after fabrication. This corrosion inhibiting specification will contribute to steady-state, long term operation.

3200 SERIES TELESCOPIC PLATFORM BLEACHERS

When a stadium or auditorium type feel is required, telescopic platforms with folding chairs create the perfect environment. Whether in an arena, stadium, auditorium or performing arts centre, **Sport Systems** has a solution for your facility needs. Telescopic platforms are available in standard and custom extended rise and runs designed to accommodate folding chairs. For added comfort, chairs are available with upholstered seating and backs along with HDPE seats and backs. All models can fold up to 8 chairs at a time allowing the facility to be transformed in just minutes.

Sport Systems' telescopic bleachers feature a number of industry leading features which other manufacturers don't offer including but not limited to:

- Full tubular leg construction vs. formed C-channel construction
- Angle iron bracing vs. bent sheet metal bracing
- Panel-lam (HDPE) composite decking vs. painted plywood decking
- Custom rise design capability vs. standard rise only

These characteristics ensure that your telescopic system will stand up to the most rigorous institutional use and offer years of reliable operation.

Bleachers are available with: manual or Posi-Drive Electrical operation, bench seating and individual chairs and a number of other accessories such as hand rails, end curtains and more. These systems are designed according to NBC requirements.

ARENA BLEACHERS

At **Sport Systems**, we provide the solution to any arena seating application. Our bleachers feature welded steel framework that is hot-dip galvanized after fabrication. Corrosion is no longer an issue in a damp arena environment.

These rugged units are decked with rigid aluminum extrusions providing a long lasting installation. Bleachers are typically designed as a closed desk system, preventing trash & debris from falling beneath the seating structure. This design allows for rapid clean up following any event.

All systems are compliant with the National Building Code (NBC) and come with numerous options including custom row spacing, custom rise and seating finishes.

Sport Systems specializes in maximizing an arena's seating capacity & sightlines while working around obstructions such as pre-eng columns, rink boards, penalty boxes and access gates. Please enquire about custom made accessible seating viewing platforms for your arena.

Beckwith Recreation Complex, Carleton Place, ON

Rycroft Arena, Rycroft, AB

TIP & ROLL BLEACHERS

Our Tip & Roll bleachers are perfect for indoor auxiliary seating requirements. These lightweight aluminum units easily tip up on their non-marring swivel casters for effortless transport while caster brakes prevent the unit from moving when in storage. All standard models fit through a standard 30" wide x 7' high door frame, maximizing transportation & storage flexibility.

Our exclusive outrigger adds safety & stability to the units & is standard on all 4-row units. All Tip & Roll bleachers feature anodized aluminum seat boards, mill finish double-wide aluminum floorboards and riser planks. These systems include non-marring rubber foot pads which protect your hardwood floor when the unit is in place.

These standard systems are available in 2, 3 and 4-row versions. Please consult our website to preview length and seating capacity charts.

BASKETBALL

OUTDOOR: INSTITUTIONAL IN-GROUND BASKETBALL SYSTEM

The most rugged & recognizable basketball system in the outdoor sports market. Our superior system features a 4 ½" O.D. galvanized pole with a 48" gooseneck galvanized to ASTM standards, a cast aluminum backboard & a variety of goal choices. This system is most popular with Parks & Recreation departments, schools, & community playgrounds. If you need an indestructible & maintenance-free outdoor basketball system, ask for the original goose.

Shown With 240SG Goal

OUTDOOR: INSTITUTIONAL WALL MOUNTED BASKETBALL SYSTEM

This durable system allows for basketball play where space is limited. Standard features include a heavy duty, galvanized steel wall mount structure and our cast aluminum backboard. For all outdoor models, choose one of the following goal options: 240SG double goal with mesh, big ugly galvanized goal (BUGG) or 5500 breakaway goal with mesh.

Shown With BUGG Goal

GYM FLOOR COVERS

GYM FLOOR COVERS

Our vinyl gym floor covers are available in weights of 22 oz/sq. yd. and 30 oz/sq. yd. As with most of our products, customization is always an option for each and every unique design and situation. Our model 55-22 Defender Series features 22 oz/sq. yd. vinyl coated polyester reinforced fabric. This cover is perfect in situations where occasional floor protection is needed from moderate foot traffic, table and chair use. The Defender Series is suited best for those who plan to use the cover up to 15 times in a calendar year and features a reversible royal blue and grey colour.

Model 55-30 is our Champion Series ultra heavy-duty cover. This system features 30 oz/sq. yd. vinyl coated polyester reinforced fabric, offering the very best in overall protection. It is ideal for facilities where the gym doubles as a sporting and event venue where foot traffic, table and chair use is heavy. The Champion Series vinyl covers are rated for use 15 or more times per calendar year, are available in reversible royal blue and beige, and come with an 8-year limited warranty.

STORAGE RACK

The most efficient way to deploy and store your gym floor cover is by using our heavy-duty rack system. These rack systems allow you to store up to 10,000 sq.ft. of material in a 12' x 3.5' footprint. Folding a gym floor cover for storage purposes will lead to the formation of creases, eventually preventing the cover from laying flat. Our storage racks unique rolling design is the ideal way to keep your investment in excellent condition. Each rack includes non-marring castors and two manual hand winders.

GYM FLOOR COVERS

ACCESSORIES

POWER WINDER

This electric powered winder makes rolling up your floor covers a breeze! Heavy-duty, portable, & unlike its competitors, backed by a full lifetime warranty.

SEAM TAPE APPLICATOR

Solid steel construction with comfortable hand grips & durable rubber wheels allow for easy operation & maintenance. Makes application of seam tape fast & easy!

STORAGE RACK COVER

When storage space is minimal & aesthetics are important, this storage rack cover is the ideal solution for your gym.

SEAM TAPE

Our seam tape offers full protection, preventing chair & table legs from catching at the fabric edges. Users often deploy seam tape in high traffic areas for patron safety and during events that will see refreshments being served. Seam tape acts as a barrier preventing any liquid from spilling onto the floor. This tape goes down easy and will not leave any adhesive residue on the floor cover. Tape is 3" wide to ensure full coverage of the seams.

GYM MATS

CRASH PADS

Our crash pads are constructed of 44 I.L.D. polyurethane foam. 8", 10" & 12" cushions are made of solid block foam, while all others are constructed with a honeycomb foam design. These pads also feature an 18 oz. top and bottom vinyl cover, with 4" of breather mesh around the entire centre perimeter. Mat covers are double stitched & come standard with reinforced carrying handles. Ideal for gymnastics, indoor rock climbing, high jump, cheerleading & other training programs.

FOLDING MATS

Sport Systems handles a wide array of folding mats for schools, daycares, gymnastics, martial arts and tactical training programs. Standard colours include blue, yellow, black, green, beige & red. These mats are covered with heavy-duty, easy to clean, anti-fungal vinyl & feature sewn-in Velcro fasteners. Sizes range from 4' x 4' to 6' x 12'. Speak to your product specialist about specifying the foam filler compound that's right for your application. Custom sizes available upon request.

SPEED SKATING PADDING

Safety padding for speed skating facilities is vital and must adhere to strict specifications. Speed Skating Canada has developed a set of guidelines for establishing the minimum speed skating crash protection required for both practice and competitive applications. There are different requirements for long track and short track competition. Call us today to discuss your speed skating padding requirements.

WALL PADDING

STAGE MAT PADDING

A stage in a gymnasium presents a critical hazard when athletic activity is taking place. **Sport Systems** offers custom-made stage padding for your facility. All stage padding is manufactured with a hinge, which enables you to access under-stage storage areas without having to remove your padding. A standard stage pad is constructed of 2" high-density foam, & a heavy-duty vinyl cover. Available in yellow, forest green, gray, beige, black, royal blue, navy blue, burgundy & red.

POST, COLUMN & BEAM PADDING

Sport Systems offers padding for posts, poles, columns, I-beams & more. We can construct these pads round, square, hexagonal, 3-sided or as a flange style. Each pad is custom-made to the client's requirements. Standard materials include a 2" high-density impact resistant foam and a heavy duty vinyl cover. Available in yellow, forest green, gray, beige, black, royal blue, navy blue, burgundy & red. If you can build it, we can pad it.

PERMANENT WALL PADDING

Our clients use permanent wall pads in their gymnasiums and around their outdoor sports fields. Our permanent wall padding series is designed to be permanently mounted. Standard features: 2"W x 6'H with 2" thick high-density foam, heavy-duty vinyl cover available in 9 standard colors, with a leather emboss finish. Our padding is treated with U.V. pigments for prolonged exposure, is mildew and rot resistant and can easily be cleaned with mild soap & water. Vinyl covers are fire rated.

You can use our permanent wall padding to compliment your facility with team colors or logos to really show off your pride!

CUSTOM CUTOUTS

All permanent wall padding is fully customizable in terms of panel size and can be supplied with cutouts for light switches, electrical outlets, fire alarms and thermostats.

WALL PADDING

DE-ESCALATION/SECLUSION ROOM PADDING

Quiet rooms, also known as calming rooms, de-escalation rooms, or seclusion rooms, are used to create an environment completely removed from outside distractions, facilitating extreme relaxation and/or contemplation within a safe environment. These rooms are typically equipped with floor and wall padding and can also involve impact-absorbing floor tiles and other safety features. We also design custom padding for sensory rooms, which in some cases involve more complex design features, such as softplay equipment, interactive programming, lighting, audio, etc.

Standard pad features include: 7/16" O.S.B. backing, 2" thick high-density foam with low smoke polychloroprene latex compound, heavy-duty 14 oz. or 18 oz. vinyl cover and custom made pad sizes for a clean fit in each room.

*** For applications in Quiet Rooms, Sport Systems uses padding that meets NBC requirements for interior finishes requiring a pass of the CAN/ULC-S102 of the padding as AN ASSEMBLY. Most vendors have fire-rated vinyl, but their entire pad as an assembly might not pass this test. Make sure to enquire about this important distinction when purchasing custom padding for Quiet Rooms.**

Each facility has different requirements, layouts and room designs. Our in-house design team can accommodate any request with our extensive experience and flexibility with custom padding applications.

Please contact a member of our sales team for a quick consultation on how we can turn any room into a quiet room with our innovative padding solutions.

NETTING

SPORTING (INDOOR & OUTDOOR)

Sport Systems provides netting and installation services for arenas, baseball diamonds, & sports field applications. All netting is custom manufactured to ensure the proper fit and to simplify installation.

Netting can be supplied as (1) raw mesh, (2) with roped edges, or (3) with taped & grommeted edges. Netting features a knotless construction which reduces wind drag and fatigue while increasing both aesthetics & spectator visibility.

All outdoor netting is formulated with U.V. inhibiting compounds to increase its service life.

Netting is available in black, white and clear monofilament styles. Speak to a product specialist today about your specific application.

TURNKEY NETTING BARRIERS

Sport Systems also provides a turnkey style, design and build approach to netting barriers that includes the supply and installation of foundations, poles and cable and hardware infrastructure. Turnkey barrier designs can feature steel, lumber or even concrete posts. Speak to a project manager today to discuss your upcoming netting barrier requirements.
